

**ACT PRESS RELEASE****Date of Release: January 2008****Advanced Charger Technology Announces New Charging Ability for Vertex Radios**

Advanced Charger Technology (ACT), a leader in battery charger technology, announces new charging capability for Vertex Radios. These include Vertex Standard VX 130, 180, 210, 410, 420, Standard Horizon VX 510, 520, 530 and Yaesu FT-60R, VX 110, 120, 127, 150, 150, 170, and 177 radios.

ACT (Advanced Charger Technology) is a leader in battery charger technology. Their iCharge line™ of products are used throughout the world and include Police and Fire Departments, Federal and State agencies, and every branch of the US Military. The entire iCharge line features a patented Dynamic Electrochemical Wavelength (DEW™) technology. This technology implements an interactive, intelligent waveform that dynamically responds to the condition of the battery during each charge cycle. This technology offers:

- Average charge time of 30 minutes (for 1200 mAh).
- Battery conditioning to a “like-new” state at each charge, which keeps batteries in service longer and reduces the need for costly battery replacement.
- Universal chemistry for NiCd, NiMH, and Li-Ion.
- Field upgrades via simple adapter changes.
