UK Testimonials

"After evaluating the Activator we made the decision to purchase a small number of units for selected stations. The ACT Charger / conditioner is ideal for use on the frontline as our officers do not need a degree in battery management to use the unit! Green simply means the battery is charged to 100% while red indicates a fault on the battery. We plan to purchase more units when our budget allows"

Bud Abbott, Radio Comms Dept
Gloucester Police

"After evaluating the ACT charger / conditioner we have replaced two-thirds of our standard Kenwood chargers with Activators. The Activator has become a major asset in restoring confidence in our radio communications and we can now provide a more efficient and reliable service to our officers (who like the fact that they can now rely on the battery being charged to full capacity) and the general public. A major advantage for me is that when we switch to TETRA I can use the same charger and just change the adapters

We anticipate recovering the cost of the chargers in less than a year by slashing the cost of our battery replacement programme and reducing manpower used on our battery maintenance program. The Activator has certainly helped in solving some of the battery problems that we have had to cope with for years. "

Andy Sanderson, Technical Officer (Comms)
Information Systems Dept
South Yorkshire Police

"We carried out a detailed evaluation of the Activator, we found that it exceeded the companies' claims in recovering older batteries. We purchased a small number of units for our own use. The ACT Charger / conditioner proved very useful in preparing the high number of batteries required to Police the recently held Conservative Party Conference at Blackpool. The speed with which it formed new batteries <2Hrs and the very fast charge time of approximately 30 minutes to 100% charge meant that we significantly reduced the preparation time.

Derek Wignall, Radio Comms Dept
Lancashire Police

We selected the ACT system, as it will charge our batteries to full capacity in about 30 minutes and will eliminate the memory effect. This improvement in operational integrity means that our firefighters will have increased confidence in their radio communications

Bryan Durrant
Radio Strategy Project Manager
Devon Fire & Rescue Service

"We installed an ACT charger in our local station and found that within a few weeks the number of batteries being sent back as unusable has dropped dramatically".

Russell Smith, Comms Manager
Grampian Fire Brigade
